

## McGill University Research Study: Emerging Technologies and Secondary Math

To: Presidents and All Members

From: Joel Duff, Associate General Secretary – Professional Services

### For Action

OSSTF/FEESO is pleased to continue supporting innovative research in support of public education and our members' professional practice. We are therefore encouraging eligible members to consider participating in a new study led by McGill University researcher Nikki Lobczowski.

Dr. Lobczowski and the CREATE Lab at McGill's Faculty of Education are looking for volunteers to participate in a paid research study. The purpose of this study is to understand more about how (and why) teachers use technologies when teaching secondary mathematics. They are recruiting 100 high school math teachers from across Canada to complete a questionnaire about technology integration.

Participants must be secondary math teachers in Canada, and extensive use of instructional technologies is not required. All qualified participants will receive \$20 for completing the questionnaire, which should take around one hour to complete. To complete the survey, please click [this link](#).

If you have any questions about the study, please contact Nikki Lobczowski ([nikki.lobczowski@mcgill.ca](mailto:nikki.lobczowski@mcgill.ca)). If you have any questions about this DBU, contact Chris Samuel at [chris.samuel@osstf.ca](mailto:chris.samuel@osstf.ca).
